

Specialists of watch movement components, from shock absorbers to wheel trains, index assembly and barrels, we can meet all your requirements for bar turning, milling and assembled parts.

Products

The shock absorber is one of the leading products of our company. Also we accomplish fine, standard or customised device tuning to enable us to deliver a functional subassembly to our customers. In addition to these products, our machines which allow us to produce any kind of watch components.

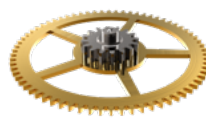

Shock absorbers

Fine adjustment devices

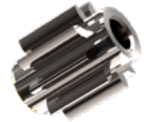

Barrel drums and covers

Wheel trains

Screw parts

Various watch movement components

Know-how

In order to master our production from A to Z, we have integrated all the trades necessary for the production of watch precision components: bar turning from \varnothing 0.09 to 20mm; manual and automated assembly; milling, gear cutting, burnishing, stamping and pressing; polishing (screw head locking and tribofinition); decoration (snailing, circular graining, smoothing, etc); heat treatment bluing; simultaneous hard facing on both sides.

Materials

We master the machining of the following materials : 20AP Steel; FINEMAC Steel; Stainless steel; Brass; Beryllium copper; Nickel; Aluminium; Titanium; 18 to 24 carat Gold.

Finishing Treatments

We guarantee the finishing of all our products, which are either entrusted to our chosen partners or entirely completed by us at Kif Parechoc, using our internal capabilities and skills. If required, parts may be gold plated, nickel plated (or any other galvanic treatment). We also accomplish decoration, polishing and steel bluing if requested by our customers.
